

## Acquisition Spend Analysis Service (ASAS)

### *Overview*

The Acquisition Spend Analysis Service (ASAS) is a software program designed to enable the Department of Defense (DoD) to analyze data related to its acquisition process and perform trend analysis and compliance checks all from one system.

The DoD procures over \$200 billion in goods and services annually. Prior to ASAS, the DoD's buying strategies were fragmented and redundant because there was no process and not enough available data. This resulted in misguided purchasing decisions and missed opportunities for cost savings.

ASAS pulls data from multiple services into a single view for complete, DoD-wide analysis, reducing the complexity of data integration across the Department. Use of ASAS across the Enterprise results in more informed decision-making across the DoD. ASAS delivers re-usable services, utilized by authorized users or applications.

ASAS allows users to aggregate spend data from multiple data sources, provides a set of pre-defined reports, and allows users to create ad hoc reports.

### *Program Mission*

ASAS will support DoD-wide strategic sourcing by providing an Enterprise-wide spend analysis capability that can access data across disparate databases; aggregate that data to a common Enterprise view; and make spend data visible and available for analysis across the Department.

### *Benefits*

ASAS reduces the complex integration of data DoD-wide, encourages the collaboration across the DoD, delivers re-usable services utilized by authorized users or applications, and ensures operational and supplier compliance.

ASAS provides DoD insight into buying patterns in order to support the most efficient sourcing strategies and better meet the purchasing needs of the warfighter. ASAS also enables improvements to data quality, accuracy, and completeness as well as enabling the assessment of procurement workload distribution. This improves DoD's ability to meet its economic goals, increases efficiency of acquisition processes, and gives users the meaningful data they need and can understand when they need it.

### **Fast Facts:**

#### *ASAS*

ASAS is a program within the Business Transformation Agency's Defense Business Systems Acquisition Executive (DBSAE) directorate. The DBSAE directorate is responsible for driving the successful implementation of DoD systems and initiatives in support of the Department's Business Transformation goals. Its mission is to develop, coordinate, and integrate projects, programs, systems and initiatives providing DoD Enterprise-wide business capabilities to the warfighter.
